BOSTIK FINDLEY

technical data sheet

FIREBAN ONE
One Part Fire Rated Polyurethane Sealant

PRODUCT
Bostik Fireban One is a one component fire rated polyurethane sealant.

DESCRIPTION
Fireban one is a fire rated, single component, low modulus polyurethane sealant curing via air humidity to form a elastomeric weatherproof fire rated seal.

RECOMMENDED USES
• Sealing joints in expansion and construction joints in precast.
• Sealing joints in insitu concrete, block and brick work.
• Penetration and core hole sealing in conjunction with fire collars or pillows or in areas requiring intumescent sealing
• Sealing joints that require acoustic rating performance

FEATURES & BENEFITS
• High durability
• Excellent weathering resistance
• Can be over painted
• Non staining
• 50% total joint movement minimum
• Australian made
• Excellent acoustic ratings
• Fire rated up to 4 hours

PERFORMANCE PROPERTIES
Typical properties after 7 days cure at 25ºC and 50% RH

APPROVALS/STANDARDS
• AS 1526-1973
• ASTM C920-1986
• BS4254-1983
• Acoustic certification to BCA Standards.
• BOMBA Approved (Malaysia)
• SISIR Approved (Singapore)

PACKAGING
Bostik Fireban One is available in 600ml sausage.

COVERAGE
The coverage below is the approximate lineal metre coverage per pack size (600ml sausage)

<table>
<thead>
<tr>
<th>Size</th>
<th>6mm x 6mm</th>
<th>10mm x 10mm</th>
<th>20mm x 10mm</th>

Calculation formula: \( W \times D \times L = \text{Litres} / 1000 \)

W = Width (mm)  D = Depth (mm)  L = Length (metres)

APPLICATION INSTRUCTIONS

JOINT DESIGN
Refer to Fire Test Certification in relation to correct depth/width ratio configuration. Back up materials impregnated with oil or bitumen materials are not to be used. Adhesion between the back up material and sealant must not occur because the excessive stresses exerted on the product may cause failure of the sealant.

PREPARATION:
Clean and dry all surfaces by removing foreign matter and contaminants such as oil, dust, grease, frost, water, dirt, old sealants and any protective coating. Dust and loose particles should be blown out of joints or vacuum cleaned. Non porous surfaces may require preparation / priming, refer primer selection guide. Cleaning solvents should not be allowed to dry or evaporate without being wiped with a clean, dry cloth.

PRIMING
For maximum performance on porous surfaces use Bostik N49 Primer. 5077 cleaner / N40 primer is recommended for non-porous surfaces. Prior to any application of Fireban One refer to primer selection guide.

APPLICATION
For application of sausages, a barrel gun is required, clip the end of the sausages and place in barrel gun. Screw end cap and nozzle on to barrel gun. Using the trigger extrude the sealant, to stop depress using the catch plate. Apply Fireban One in a continuous bead using enough pressure to properly fill the joint.
JOINT SEALING HINTS
Prime prior to the installation of the backing rod
Always use backing rod for correct sealant geometry
Ensure maximum adhesion to bond face and depth to width ratio of 1:1 to 12mm and 2:1 from 12 to 50mm
Tool sealant to achieve concave shape

W = between 12 to 50mm

MIXING
No mixing is required for Bostik Fireban One.

PRECAUTION
Bostik Fireban One sealant should not be applied with wet tooling techniques using solvents, water or detergent/soup solutions is not recommended.
Bostik Fireban One sealant should not be applied to surfaces with special protective or cosmetic coatings without prior consultation with the manufacturer. Such surfaces include, but are not limited to, mirrors, reflective glass, or surfaces coated with Teflon® polyethylene or polypropylene.
Bostik Fireban One sealant should not be applied to unpredictable absorptive surfaces such as marble, limestone or granite unless a standard of appearance has been agreed on as a result of testing for stain and/or discolouration.
Bostik Fireban One sealant cures via air humidity. Bostik Fireban One can be affected by water before or during cure. The sealant should be stored, applied or cured in areas where unusually high humidity or free water are present during the application or initial cure.
Bostik Fireban One sealant should be allowed to cure for 14 days prior to subjecting to an intermittent or continuous head of water

P.A.T.S (Pretested Adhesion To Substrate) Programme
Bostik offer a service in which a program has been established to eliminate potential field problems by pre-testing Bostik adhesives with samples of building materials to which the adhesive will be applied. This service is available on large projects where pre-application testing will aid in determining the proper surface preparation method to achieve optimum adhesion. Consult a Bostik representative for further information.

HEALTH AND SAFETY
• On contact, uncured sealant causes irritation. Gloves and protective goggles must be worn during application and use.
• Avoid contact with skin, eyes and avoid breathing in vapour.
• Wear protective gloves when mixing or using
• If poisoning occurs, contact a doctor or Poisons Information Centre.
• If swallowed, do not induce vomiting. Give a glass of water.
• If skin contact occurs, remove contaminated clothing and wash skin thoroughly for a minimum of 15 minutes and see a doctor.
• For more detailed information refer to Material Safety Data Sheet.

CLEAN-UP
Clean up uncured material and equipment immediately after use using Bostik 9907 solvent. Do not use solvents on skin.

STORAGE
Store between 5°C and 30°C. Shelf life is two years in original unopened sausage.
